

KLR650 LED Tail/Brake Light Module Installation Instructions

1. Remove the screws that hold the rear tail light cover in place.

2. Remove the incandescent bulb from the socket.

3. Insert the LED module plug into the socket.

4. Align the mounting tabs with the screw bosses.

5. Use two pieces of scotch tape to hold the tabs in place while the rear cover is replaced.

6. Replace the rear cover and screw it back in place, making sure that the screws pass through the slots in the mounting tabs.
